

- Automated daily Telegram market briefs and built a web interface with HTML, CSS, and JavaScript for viewing recommendations and performance.

EnergyPulseAI | RAG-Based Energy Market Intelligence

Python, Apache Airflow, LangGraph, Ollama, PostgreSQL, pgvector, Telegram Bot API

- Built an Airflow pipeline that collects and analyzes Indonesian energy-sector news from multiple media sources.
- Added local LLM inference and pgvector search so users can ask questions about the collected news through Telegram.

Distributed ETL Pipeline | News Classification Research Project

Python, Celery, RabbitMQ, Scikit-learn, TF-IDF, Random Forest

- Built a distributed ETL pipeline that separates news collection from the heavier classification process.
- Developed clickbait and topic-classification models with TF-IDF and Random Forest. The work was selected as a SENADA 2025 finalist and published as a co-authored paper.

EDUCATION & RECOGNITION

B.Sc. Data Science | State University of Surabaya (UNESA) | Aug 2023 - Present | GPA 3.67/4.00 (122 credits)

- Finalist & Co-Author, SENADA 2025 National Seminar | distributed ETL pipeline for clickbait and news classification.
- Semifinalist, WordPress Case Competition 2024 | data-driven digital-talent strategy for Society 5.0.
